Good morning,

The Tieton vessel has just tied off at transect 7, and has measured water depths for each point in the transect. Sampling activities will begin at the east bank (6ft of water depth). Pre-RD will conclude sampling for the day after transect 7 is complete, and return to the AECOM warehouse this evening to decontaminate equipment. Included are photos of the sampling location and crew preparing the sampling equipment.

Thanks,

Jonni

Sean, Davis, and Hunter,

Sampling is continuing on the Cayuse at Transect 3, and the Pre-RD group is on pace to complete the transect just before dark. Included are photos of VOC sample collection and filter replacement that occur during sampling.

Jason Silvertooth
